Field Invoicing and Reporting Engine

The Electronic Invoicing Software for the Oilfield

FIRE will not save your field personnel time creating tickets in the field. FIRE will save you vast amounts of time invoicing your clients, paying your employees, and creating the reports you need to run your business.

It also allows you to become more profitable by speeding your invoicing and approval process, eliminating math and pricing errors, and reporting on practically anything you need.

"After one year of using FIRE our clients are happier, less time is wasted, invoices are out faster, and reporting is better.

At the end of the day that means we're a more profitable company thanks to FIRE."
- Brad Gabel, President, Canadian Sub-Surface [200+ field employees]

Most companies spend a huge amount of time taking information from hand-written field tickets and manually re-entering it into reports for bonus payments, reports for utilization, sheets for invoicing entry, lists for asset usage, submissions to the government, and the list goes on. Doesn't it make more sense to enter the information once at the very beginning, and then automatically create all the reports from that entry? Every oilfield company knows this is the way it should work, and with FIRE, this is the way it does work.

Imagine not spending days each month re-entering times from all written tickets to figure out field bonus. No longer waiting for the field to get written invoices into the district, just so they can put it in a mailbag to head office after sitting on a desk for a week. Imagine your clients, and your own staff, being able to easily understand and find your invoices.

Does this all sound impossible because your bonus scheme and price books are too complicated, you need a signature from the field, your invoicing process is far too involved, or your field people just won't learn or accept it? It can be done, and it has been done for companies just like yours.

The creators of FIRE have been working on oilfield invoicing for almost a decade. They have not only seen just about every twist there is, they have also seen the transformation that FIRE can make in a company.

You've always thought about it - now make it happen in your company.
